

CLAIMS

1. Method for voltage stabilization of an electrical power network system comprising a producing power network system side and a consuming power network side by dynamically controlled transformer ratio n .
5
2. Method according to claim 1, wherein an on-line tap changer added to the transformer is dynamically controlled by changing a voltage reference.
3. Method according to claim 2, wherein a feed forward compensation is provided by a first order filter $H_F(s) = sT_d/(sT + 1)$, wherein T and T_d are tuning parameters.
10
4. Method according to claim 2, wherein a feedback controller is provided according to the equation $V_{fb} = -\max(0, \alpha (n^2 Y_{LD} - 1/Z_{LN}))$, wherein n , Y_{LD} and Z_{LN} have the meanings given above and α is a tuning parameter that is influencing the region of attraction of the equilibrium point.
